# Denit and sustainability

Denit is housing the servers in a datacenter in Amsterdam (DC2) that uses 100% renewable energy for it's operations, running on power that is being generated by windmills on the North-sea near IJmuiden (location: Amalia). Denit is using environmentally friendly, deep-water cooling from a lake nearby, resulting in a PUE of 1.3.

This statement is valid till December 31, 2018.

Agreed and signed in Amsterdam, on the 18th of March 2018:

John Dissen

Datacenter Coördinator XS4ALL
